

SMART TEA STALL MANAGEMENT SYSTEM

Output Gallery — Every Screen, Start to Finish

Java	MySQL	JDBC	Command-Line Interface	Working Build
------	-------	------	------------------------	---------------

A console-based Java + MySQL application for managing end-to-end tea stall operations — customer ordering, table & seat management, inventory, staff, suppliers, assets, finances, and reporting — all backed by a live MySQL database through JDBC.

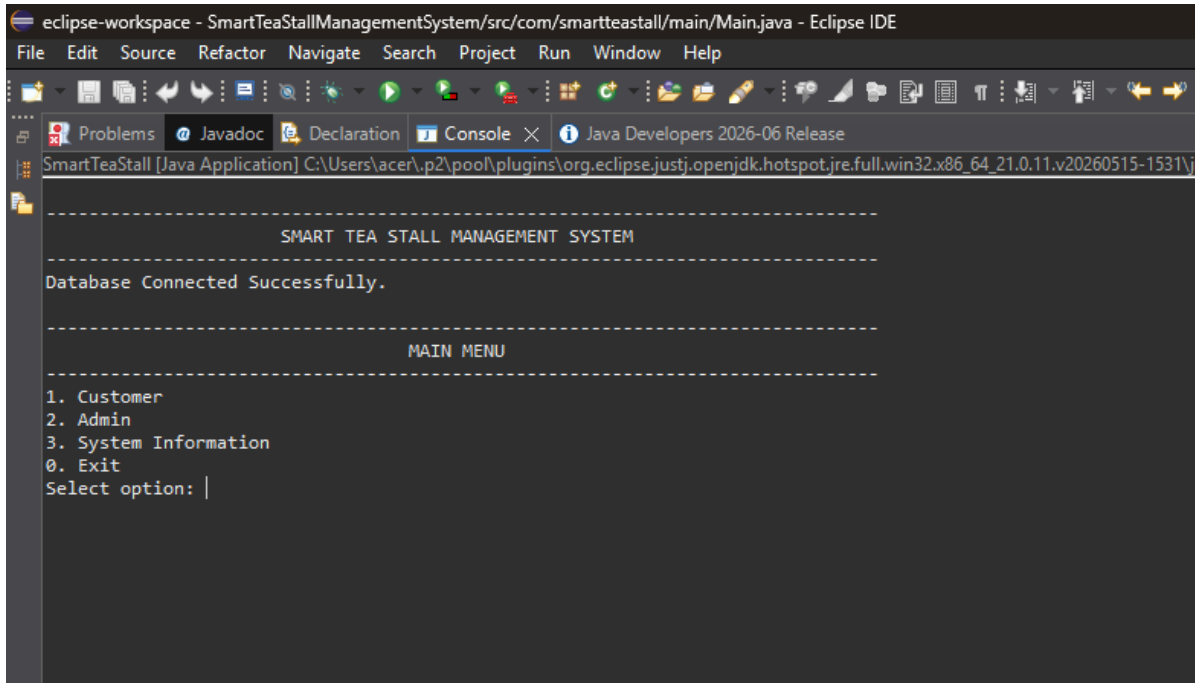

This gallery walks through every screen the application produces, from the main menu to each of the 20 admin management modules.

Customer Flow

The guided ordering journey a customer walks through, start to finish.

Main Menu

The application's starting screen after a successful database connection.
